Preface xxi

1 History and Features of Medaka 1
1.1 History 1
1.2 Phylogeny 3
1.2.1 Phylogeny and distribution of medaka and relatives 3
1.2.2 Genetic diversity of medaka 7
1.3 Advantage of Medaka as a Model Fish 9
1.3.1 Advantageous features in general 9
1.3.2 Color mutants 11
1.3.2.1 Introduction and history 11
1.3.2.2 Body color and chromatophores 12
1.3.2.3 Genes mutated in body-color mutants 14
1.3.2.4 Future use of body-color mutants 16
1.3.3 Wild strains 16
1.3.4 Inbred strains 18
1.3.4.1 History for establishing inbred lines 18
1.3.4.2 Characteristics of medaka inbred strains 19
Column 1.1 For those who cannot decide which medaka to use 20
1.3.4.3 Polymorphic variation among inbred strains 21
1.3.4.4 To generate and maintain medaka inbred strains 21
Column 1.2 Variation among strains 22
1.3.5 Differences from zebrafish 23

2 Medaka Management 31
2.1 How to Obtain Medaka 31
2.1.1 Obtain medaka from researchers who are culturing medaka 31
2.1.2 Contact the National Bio-Resource Project (medaka) in Japan 31
2.1.3 Purchase medaka from commercial vendors (aquarium shops) 32
2.1.4 Catching medaka from the wild 32
2.2 Rearing Medaka 33
2.2.1 Breeding program 33
2.2.2 Recirculating system (mid-scale system) 35
2.2.2.1 Aquarium system 35
2.2.2.2 Maintenance of recirculating system 40
Column 2.1 Soft water is suitable for medaka breeding 41
2.2.3 Large-scale breeding 47
2.2.3.1 Outline of large-scale water system at JST Kyoto 47
2.2.3.2 Water system at JST Kyoto facility 47
2.2.3.3 Water condition 48

2.2.4 Rearing without water circulation (small-scale system) 49
2.2.4.1 Room condition, racks, and tanks 49
2.2.4.2 Water 49
2.2.4.3 Daily care 49
2.2.5 Outdoor breeding 50
2.3 Feeding 54
2.3.1 Feed for adult fish and larvae 54
2.3.2 Feeding schedule 54
2.3.3 Feed 55
2.3.3.1 Brine shrimp (Artemia) 55
2.3.3.2 Dry feed 59
2.3.3.3 Paramecium 60
2.3.3.4 Other feed types 60
2.4 Diseases 60
2.4.1 Tail rot disease 60
2.4.2 Matsukasa disease 61
2.4.3 Trichodina 62
2.4.4 Water mold 63
2.4.5 White spot disease 63
2.4.6 Water mites 64
2.4.7 Gyrodactylus 64
2.5 Goods for Medaka 65

3 Reproduction of Medaka 67
3.1 Sex Determination 67
3.1.1 Sex determination in medaka 67
3.1.2 Sex determination in the genus *Oryzias* 68
3.1.3 Spontaneous sex reversals in medaka 69
3.2 Hormonal Control of Gonadal Development 69
3.2.1 Hypothalamic–pituitary–gonadal axis 69
3.2.2 Oocyte growth and maturation 70
3.2.3 Spermatocyte growth and maturation 71
3.3 Oogenesis and Spermatogenesis 72
3.3.1 Oogenesis 72
3.3.2 Spermatogenesis 74
3.4 Egg Envelope (Chorion) 75
3.4.1 Morphology and biochemical characters of the medaka egg envelope 75
3.4.2 Origin of the egg envelope in medaka fish 76
3.4.3 Gene structure of egg envelope glycoproteins in medaka 80
3.4.4 Molecular mechanisms of liver-specific expression of Choriogenins' Genes 81
3.4.5 Assembly of the Choriogenins into the egg envelope in the ovary 84
3.4.6 Egg envelope glycoproteins as the substrates for the hatching enzyme 86
3.4.7 Conclusion 86

3.5 Necessary Conditions for Spawning 87
3.6 Reproductive Behavior 88
3.7 Mating 89
3.8 Embryo Collection 90
3.8.1 Embryo collection directly from females 90
3.8.2 Embryo collection from the bottom of the tank 90
3.9 Embryonic Culture 90
3.9.1 Cleaning 90
3.9.2 Incubation 91
3.10 Larval Culture 91
3.11 Generation of Sex-Reversed Medaka 91
3.11.1 Treatment with androgen to generate XX males 92
3.11.2 Treatment with estrogen to generate XY females 92
3.11.3 High-temperature treatment to generate XX males 92
Column 3.1 Interstrain Variation in Reproductive Performance 93

4 Strain Preservation and Related Techniques 101
4.1 Shipping 101
4.1.1 Scheduling 101
4.1.2 Sorting of eggs or fish 101
4.1.3 Procedures for packaging 102
4.1.4 Transgenic medaka 102
4.1.5 MTA (Material Transfer Agreement) 102
4.2 Quarantine and Pasteurization 104
4.2.1 Materials for pasteurization of eggs/embryos 104
4.2.2 Procedure (Movie M4-1) 104
4.3 Cryopreservation of Medaka Sperm 105
4.3.1 Overview 105
4.3.2 The procedure for cryopreservation (Figure 4-2 and Movies M4-2) 105
4.3.3 Materials 106
4.3.4 Solutions 107
4.3.5 Procedures 107
4.4 Artificial Insemination Using Frozen Medaka Sperm 110
4.4.1 Overview 110
4.4.2 Solutions 111
4.4.3 Materials 112
4.4.4 Procedures (Movies M4-3) 113
Column 4.1 Infertile mating method for collecting unfertilized eggs 115

5 Looking at Adult Medaka 117
5.1 General Morphology 117
5.1.1 Secondary sexual characters 117
5.1.2 Body color 118
5.1.2.1 Pigment cells (chromatophores) 118
5.1.2.2 Structures of the chromatophores 119
5.1.2.3 Chromatophores in medaka 119

5.1.2.4 Chromatophore distribution in medaka 123
5.1.2.5 See-through medaka 124
5.2 Anatomy and Histology 124
5.2.1 Observations of internal organs 124
5.2.1.1 Observations of internal organs in the live see-through medaka 124
5.2.1.2 Dissection of adult medaka 126
5.2.2 Horizontal and sagittal sections of juvenile medaka 127
5.2.3 Nervous system 127
5.2.3.1 Adult central nervous system 127
5.2.3.2 Adult peripheral nervous system 139
5.2.4 Endocrine system 147
5.2.4.1 Hypothalamo–pituitary system 147
5.2.4.2 Pineal organ (epiphysis) 150
5.2.4.3 Thyroid gland 152
5.2.4.4 Heart 153
5.2.4.5 Interrenal gland and chromaffin cells 153
5.2.4.6 Gonads 153
5.2.4.7 Endocrine pancreas (islet of Langerhans) 154
5.2.4.8 Gastrointestinal tract 154
5.2.4.9 Ultimobranchial gland 154
5.2.4.10 Corpuscle of Stannius 154
5.2.4.11 Urophysis 155
5.2.4.12 Thymus 155
5.2.5 Gonads 155
5.2.5.1 Ovary 156
5.2.5.2 Testis 157
5.2.6 Kidney 157
5.2.6.1 Pronephros 158
5.2.6.2 Mesonephros 158
5.2.6.3 Histology of the kidney 158
Column 5.1 How to make sections of a meture ovary for histological analysis 160

6 Looking at Medaka Embryos 165
6.1 Development of Various Tissues and Organs 165
6.1.1 Developmental stages 165
6.1.1.0 Stage 0; Unfertilized Egg – Figure 6-1 165
6.1.1.1 Stage 1; activated egg stage (3 minutes) – Figure 6-1 167
6.1.1.2 Stage 2; blastodisc stage – Figure 6-1 167
6.1.1.3 Stage 3; two-cell stage (1 hour 5 minutes) – Figure 6-1 167
6.1.1.4 Stage 4; four-cell stage (1 hour 45 minutes) – Figure 6-1 168
6.1.1.5 Stage 5; eight-cell stage (2 hours 20 minutes) – Figure 6-1 168

6.1.1.6 Stage 6; 16-cell stage (2 hours 55 minutes) – Figure 6-2 168
6.1.1.7 Stage 7; 32-cell stage (3 hours 30 minutes) – Figure 6-2 168
6.1.1.8 Stage 8; early morula stage (4 hours 5 minutes) – Figure 6-2 168
6.1.1.9 Stage 9; late morula stage (5 hours 15 minutes) – Figure 6-2 168
6.1.1.10 Stage 10; early blastula stage (6 hours 30 minutes) – Figure 6-2 168
6.1.1.11 Stage 11; late blastula stage (8 hours 15 minutes) – Figure 6-2 170
6.1.1.12 Stage 12; pre-early gastrula stage (10 hours 20 minutes) – Figure 6-3 170
6.1.1.13 Stage 13; early gastrula stage (13 hours) – Figure 6-3 170
6.1.1.14 Stage 14; pre-mid-gastrula stage (15 hours) – Figure 6-3 170
6.1.1.15 Stage 15; mid-gastrula stage (17 hours 30 minutes) – Figure 6-3 170
6.1.1.16 Stage 16; late gastrula stage (21 hours) – Figure 6-3 170
6.1.1.17 Stage 17; early neurula stage (1 day 1 hour) – Figure 6-3 171
6.1.1.18 Stage 18; late neurula stage (1 day 2 hours) – Figure 6-4 172
6.1.1.19 Stage 19; two-somite stage (1 day 3 hours 30 minutes) – Figure 6-4 172
6.1.1.20 Stage 20; four-somite stage (1 day 7 hours 30 minutes) – Figure 6-4 172
6.1.1.21 Stage 21; six-somite stage (1 day 10 hours) – Figure 6-4 172
6.1.1.22 Stage 22; nine-somite stage (1 day 14 hours) – Figure 6-4 172
6.1.1.23 Stage 23; 12-somite stage (1 day 17 hours) – Figure 6-4 172
6.1.1.24 Stage 24; 16-somite stage (1 day 20 hours) – Figure 6-5 174
6.1.1.25 Stage 25; 18–19-somite stage (2 days 2 hours) – Figure 6-5 175
6.1.1.26 Stage 26; 22-somite stage (2 days 6 hours) – Figure 6-5 175
6.1.1.27 Stage 27; 24-somite stage (2 days 10 hours) – Figure 6-5 175
6.1.1.28 Stage 28; 30-somite stage (2 days 16 hours) – Figure 6-5 175
6.1.1.29 Stage 29; 34-somite stage (3 days 2 hours) – Figure 6-5 175

6.1.1.30 Stage 30; 35-somite stage (3 days 10 hours) – Figure 6-6 176
6.1.1.31 Stage 31; gill blood vessel formation stage (3 days 23 hours) – Figure 6-6 176
6.1.1.32 Stage 32; somite completion stage (4 days 5 hours) – Figure 6-6 176
6.1.1.33 Stage 33; stage at which notochord vacuolization is completed (4 days 10 hours) – Figure 6-6 176
6.1.1.34 Stage 34; pectoral fin blood circulation stage (5 days 1 hour) – Figure 6-6 178
6.1.1.35 Stage 35; stage at which visceral blood vessels form (5 days 12 hours) – Figure 6-6 178
6.1.1.36 Stage 36; heart development stage (6 days) – Figure 6-7 178
6.1.1.37 Stage 37; pericardial cavity formation stage (7 days) – Figure 6-7 178
6.1.1.38 Stage 38; spleen development stage (8 days) – Figure 6-7 178
6.1.1.39 Stage 39; hatching stage (9 days) – Figure 6-7 178
6.1.1.40 Stage 40; first larval stage – Figure 6-8 179
6.1.1.41 Stage 41; second larval stage – Figure 6-8 180
6.1.1.42 Stage 42; third larval stage – Figure 6-8 180
6.1.1.43 Stage 43; first juvenile stage – Figure 6-8 180
6.1.1.44 Stage 44; second juvenile stage – Figure 6-8 180
6.1.1.45 Stage 45 – Figure 6-8 180
6.1.2 Brain 180
6.1.2.1 Gastrula step (stages 13–17) 182
6.1.2.2 Neurula step (stages 17–18) 182
6.1.2.3 Neural rod step (stages 19–22) 184
6.1.2.4 Neural tube step (stages 23–27) 184
6.1.2.5 Late embryonic brain step (stages 28–34) 185
6.1.2.6 Larval brain step (stages 35–42) 187
6.1.3 Hatching gland 187
6.1.3.1 Origin of fish hatching gland cells 188
6.1.3.2 Secretion of hatching enzymes from hatching gland cells 190
6.1.4 Eye development 191
6.1.4.1 Specification of the anterior neural plate 191
6.1.4.2 Eye field determination and establishment of retinal identity 191
6.1.4.3 Splitting of the retinal anlage into two retinal primordia 193
6.1.4.4 Morphogenesis I: evagination of the optic vesicle 194
6.1.4.5 Morphogenesis II: formation of the optic cup 194
6.1.4.6 Retinal differentiation I: central retina 196
6.1.4.7 Retinal differentiation II: CMZ 196
6.1.4.8 Retinotectal projection 196

6.1.5 Branchial arch and jaws 198
6.1.5.1 Skeletal development 198
6.1.5.2 Muscle development 199
6.1.6 Vasculature 201
6.1.6.1 Vascular anatomy of the developing medaka 201
6.1.6.2 Origin of the medaka endothelial lineage 210
6.1.6.3 Abbreviations 211
6.1.6.4 Acknowledgment 212
6.1.7 Blood cells (hematopoiesis) 212
6.1.7.1 Overview 212
6.1.7.2 Observation of Embryonic and Adult Blood Cells 212
6.1.8 Heart 214
6.1.8.1 Overview 214
6.1.8.2 Heart architecture 215
6.1.8.3 Heart morphogenesis 216
6.1.8.4 Observation of the developing heart 225
6.1.9 Kidney 227
6.1.9.1 Introduction 227
6.1.9.2 Nephrogenesis 227
6.1.9.3 Pronephros 229
6.1.9.4 Mesonephros 229
6.1.10 Thymus 229
6.1.10.1 Overview 229
6.1.10.2 Early development of the thymus 229
6.1.10.3 Cortex and medulla 231
6.1.10.4 Involution of the thymus 231
6.1.11 Gut and liver 231
6.1.12 Bones 234
6.1.12.1 Vertebral column 234
Column 6.1 Key words in bone formation 242
6.1.13 Fins 243
6.1.13.1 Introduction 243
6.1.13.2 Fin anatomy 243
6.1.13.3 Embryonic fin development (from fertilization to stage 39 [hatching stage]) 244
6.1.13.4 Fin development after hatching (after stage 39) 244
6.1.13.5 Gene expression during fin development 246
6.1.14 Gonads 247
6.1.14.1 Introduction 247
6.1.14.2 PGC specification 247
6.1.14.3 Formation of gonadal primordium (Figure 6-60B) 249
6.1.14.4 Sexual dimorphism in germ cell proliferation (Figure 6-61) 249
6.1.14.5 Post-hatching period in XX gonads 251
6.1.14.6 Post-hatching period in XY gonads 251
6.2 Medaka EGG Envelope and Hatching Enzyme 252
6.2.1 Overview 252

6.2.2 Preparation of a hatching enzyme solution from hatching liquid 254
6.2.3 Simple method for preparing hatching enzyme solution 255
6.2.4 Solubilization of the egg envelope using hatching enzyme 255
Column 6.2 Easy method for preparation of a small amount of hatching enzyme solution (see DVD for figure) 256
6.3 Observation of Embryos (Embedding Embryos) 256
6.3.1 Anesthesia of Embryos using MS-222 256
6.3.2 Observation of embryos (mounting) 257
6.3.2.1 Living embryos 257
6.3.2.2 Processed Embryos 260
6.4 Whole Mount *in situ* Hybridization (see Section 6.1.8. for a similar protocol) 261
6.4.1 Fixation and storage 261
6.4.2 Rehydration, proteinase K Treatment and post-fixation at RT 262
6.4.3 Hybridization and washing 263
6.4.4 Immunoreaction and washing antibodies 263
6.4.5 Staining 264
6.5 Embedding in a Plastic Resin (Technovit 7100) 264
6.5.1 Agarose mounting (Figure 6-68) 264
6.5.2 Dehydration and infiltration (Figure 6-68) 265
6.5.3 Polymerization (Figure 6-68) 265
Column 6.3 Pigment cells (Figure 6-69) 266
Column 6.4 Kupffer's vesicle 267

7 Transgenesis 277
7.1 Microinjection Technique for Medaka Eggs 277
7.1.1 Equipment required 278
7.1.1.1 Egg holder 278
7.1.1.2 Glass needles for microinjection 280
7.1.1.3 Injector and manipulator with needle holder 281
7.1.1.4 Microscope and light 282
7.1.1.5 Other tools and fertilized eggs 283
7.1.2 Microinjection procedure 283
Column 7.1 Microinjection into nuclei 285
7.2 DNA Microinjection 287
7.2.1 DNA microinjection for transgenesis and transient expression 287
7.2.2 DNA construction for transgenesis 289
Column 7.2 Toxicity of DNA 291
Column 7.3 The form of DNA for transgenesis 291
7.3 RNA Microinjection 291
Column 7.4 Importance of 3'-UTR 292

7.4 Gene Knockdown Technology 292
7.4.1 Morpholinos 293
7.4.2 gripNAs 293

8 Toxicology 297
8.1 Status of Medaka in Toxicology 297
8.2 Fish Culture for Toxicology 298
8.2.1 Preparation and acclimation of fish 298
8.2.2 How to expose to chemicals 301
8.3 Standardized Toxicity Testings 303
8.3.1 International standardization for toxicity tests 303
8.3.2 Acute Toxicity Test (OECD TG203) 303
8.3.3 Early-life stage toxicity test (OECD TG210) 304
8.4 Applied Toxicity Tests for Endocrine Disrupters 305
8.4.1 Screening assays using medaka 306
8.4.2 Fish full lifecycle testing (FFLC) using medaka 306
8.4.3 Sensitive period to estrogen substances in early life stages 307
8.5 Vitellogenin as an Environmental Endocrine Disrupting Chemical Exposure Index 310
8.5.1 Features of VTG 310
8.5.2 Vitellogenin measurement 310
8.5.3 Summary and comments 313
8.6 New Techniques and Other Studies 314
Column 8.1 Application of medaka and *olyzias Sp.* in seawater. Can medaka survive in seawater? 315

9 Bioinformatics 319
9.1 Medaka Genome Project and Genome Sequence Database 319
9.1.1 Genome database 320
9.1.2 Polymorphism between the Southern and Northern Japanese populations 323
Column 9.1 How to get BAC/Fosmid clones hardboring the target gene 324
9.2 Database for Transcribed Sequences 324
9.2.1 EST database 324
9.2.2 Developmental Expression database 326
9.3 Positional Cloning of the Causal Gene in Mutants 327
9.3.1 Mapping mutants using SSLP and RFLP markers 327
9.3.1.1 Creating mapping panel 330
9.3.1.2 Identification of the linkage group linked to a mutation using bulk segregation analysis with M markers. 331
9.3.1.3 Low-resolution mapping 336
9.3.1.4 Intermediate-Resolution Mapping 338
9.3.1.5 High-Resolution Mapping 339
9.3.1.6 *In silico* chromosome walking 339
9.3.1.7 Identification of target gene 343
Column 9.2 Construction of fosmid library 343

10 Advanced Techniques 345
10.1 Cell Culture from Medaka Embryo 345
10.1.1 Flow chart of primary cell culture from medaka embryo 346
10.1.2 Equipment and materials 347
10.1.3 Protocol 347
10.1.4 Notes 348
10.2 *In Vitro* Spermatogenesis from Primary Spermatocytes 350
10.2.1 Flow chart of *in vitro* spermatogenesis from primary spermatocytes 350
10.2.2 Required equipment and materials for primary culture of primary spermatocytes 351
10.2.3 Protocol 352
10.3 Single Cell Labeling 353
10.3.1 Flow chart of single cell labeling 354
10.3.2 Required equipment and materials 354
10.3.3 Protocol of single cell labeling 356
10.3.4 Example of cell labeling and tracing 356
10.4 Imaging of Living Embryos 357
10.4.1 Flow chart of imaging of living embryos 358
10.4.2 Fluorescent labeling 358
10.4.3 Sample preparation 359
10.4.4 Recording setup 359
10.4.5 Data analysis 360
10.4.6 Time-lapse imaging of primordial germ cell migration 360
10.4.7 Conclusion 361
10.5 Transplantation 361
10.5.1 Cell transplantation in embryo. Figure 10-11 shows the procedure of cell transplantation in embryo briefly 362
10.5.2 Scale 365
10.6 Nuclear Transplantation 367
10.6.1 Equipment and materials 368
10.6.2 Flow chart of the method 368
10.6.3 Perspectives 368
10.7 Mutagenesis 369
10.7.1 Benefits of using medaka 369
10.7.2 Mutagens that have been used for medaka 370
10.7.3 Mutagenesis screen using ENU 370
10.8 Tilling (Gene Knockout) 374
10.8.1 Outline of the TILLING method 374
10.8.2 An example of screening and quality of our library 379
10.8.3 About SNPs 380
10.8.4 How to obtain a Medaka TILLING library 380
10.9 Cell Trace Experiment with a Caged Fluorescent Dye During Medaka Gastrulation 381
10.9.1 Flow chart of cell trace experiment with a caged fluorescent dye 383

10.9.2 Equipment and materials 383
10.9.3 Protocol (Figure 10-2) 384
10.9.4 Notes 386

Appendix 1 Guidelines on Using Medaka in Experiments 389
Appendix 2 Internet Websites Related to Medaka Research 391
Appendix 3 Solutions 397
Appendix 4 Inbred Strains, Closed Colonies, and Mutant Strains 399
Appendix 5 Index of Abbreviation 403
Attributions 407
Index 411
